SIMON LU

Simon561@outlook.com | (678) 510-3109 | github.com/SimonLu1 | www.linkedin.com/in/simonlu03

EDUCATION

Clemson University May 2027
***Bachelor of Science* in Computer Science**

Spartanburg Community College January 2024
***Associate of Science* in Electronics Engineering** GPA 3.8

SKILLS

Programming Languages: C, C++, Java, JavaScript, Python, SQL
Frameworks & Tools: Git, GitHub, IntelliJ IDEA, VS Code, Ansible, Gradle, HTML, CSS, Next.js, AWS
Technologies: PostgreSQL, Cisco Catalyst, MQTT, Stripe API, LLM Evaluation, Artificial Intelligence
Additional: AutoCAD, SolidWorks, PLC Systems Programming, DC/AC Circuits
Languages: English (Fluent) & Chinese (Conversational)

EXPERIENCE

Handshake AI Remote
AI Software & LLM Evaluator June 2026 – Present
- Evaluate software code and LLM-generated responses for correctness, reasoning quality, technical accuracy, and adherence to detailed requirements, evaluation criteria, and project guidelines
- Review programming solutions to identify logic errors, edge cases, implementation issues, and incorrect outputs
- Apply detailed evaluation rubrics and provide structured feedback to improve model accuracy, reliability, instruction following, reasoning quality, and overall response quality

Clemson University Clemson, SC
Network Operations Intern (Hybrid) June 2025 – January 2026
- Automated network configuration workflows using Ansible playbooks, reducing repetitive manual setup time by 50%
- Developed a web-based tool for IP lookup, CNAME resolution, and integrated grep and dig utilities to improve network diagnostics and troubleshooting efficiency
- Supported and maintained Cisco Catalyst switches, ensuring reliable and secure campus network operations

Clemson University Clemson, SC
IT Support Technician June 2024 – August 2025
- Diagnosed and resolved hardware, software, network, and classroom technology issues for students and faculty, helping maintain reliable classroom operations and reducing IT-related disruption by 20%
- Collaborated with IT staff to implement and improve classroom technology while responding to campus technical issues
- Maintained, upgraded and tested classroom systems to ensure consistent performance across campus

PROJECTS

TigerRide | *CUhackit 2026 (Hackathon)*
- Collaborated with a team to develop a cloud-based rideshare platform connecting Clemson students traveling along similar routes and provides a centralized way to coordinate rides
- Integrated AWS services, PostgreSQL, location services, and Stripe to support application functionality including routing, authentication, payment processing, and real time features

Connect Four Game | *Java, IntelliJ IDEA, Gradle, JUnit*
- Built an extensible object oriented Connect Four game supporting multiple board implementations, human players, random AI, and strategic AI opponents, customizable gameplay, and board rotation
- Applied Builder, Factory, Strategy, and Chain of Responsibility patterns with MVC architecture to create modular components with clearly separated responsibilities
- Developed JUnit tests and used Gradle based automated quality checks to validate game behavior, and improve maintainability

Ataxx | *Java, IntelliJ IDEA, JUnit*
- Developed an object-oriented Ataxx game with board management, legal move validation, player turns, piece tracking, game state management, and multiple board representations
- Designed using interfaces, abstract classes, polymorphism, and JUnit tests to create modular and testable game components

INVOLVEMENT & HONORS

Member: Society of Hispanic Professional Engineers (SHPE), Association of Latino Professionals For America (ALPFA), ColorStack, Asian Student Association (ASA)
Awards: Dean's List, Phi Theta Kappa, Beta Club Member
